

Cerotek was founded in 2018 as an innovative Startup from the intuition of a psychiatrist and medical director of several care facilities for elders and people with disability.

Cerotek's project, along with CentroStella managing software, allows to offer a concrete support in the revolution of the concepts of assistance and prevention.

Thanks to the electronical devices supporting Telemedicine and Teleassistance, a safe and monitored context is favored, facilitating healthcare workers' job and improving the quality of life of the person assisted.
