Doktorbag

TELEMEDICINE

CEROTEK

Doktorbag

Doktorbag is the service offered in the Telemedicine field. It's a case through which is possible to monitor different vital parameters from home

Thanks to the medical devices in the case, it's possible to perform 6 measurements: WEIGHT, GLYCEMIA, BODY TEMPERATURE, BLOOD PRESSURE, ELECTROCARDIOGRAM, HYDRATION.

With the App installed on the Tablet in the case, it will be possible to automatically send the measurements to CentroStella.

CentroStella receives the measurement of the vital parameters and does a first evaluation. If necessary, an alarm notification will be sent to the doctor.

If necessary, thanks to the tablet, it's possible to start a call between assisted and operators.

N.B Total of parameters monitored: 23
