Management of
therapy

TELEASSISTANCE

CEROTEK®

Management of Therapy

The Management of Therapy is conceived both for Residential Facilities and for the people at Home.

In Residential Facilities

For each patient a NFC Tag is given, allowing easy recognition of the guest and their therapy.

On CentroStella, in the "treatment" section, the DESCRIPTION OF THE TREATMENT, PICTURES OF THE MEDICINES TO ADMINSTRATE, DATE and TIME of the beginning of the treatment and the FREQUENCY of the administration are inserted.

The use of the NFC Tag guarantees the administration of the RIGHT DOSE to the RIGHT PERSON at the RIGHT TIME, following the 7G REGULATION.

Once the operation is completed, in the "administration therapy" section on the App, the operator will have to click on "confirm administration".

At Home

In order to guarantee a correct administration of the therapy at home, a dispenser with 28 compartments for the pills through which is possible to organize the therapy for an entire week will be given to the assisted.

The iPill Box is managed by Oranized Structures for Home Assistance. With given credentials, it's possible to access to CentroStella and see the photo, the personal data of the assisted and set the dispenser with the RIGHT TIME of administration of the medicines.

At the time set, the iPill Box will start to rotate, opening at the right compartment of the RIGHT THERAPY. Through the service via App given to the assisted, at the time set a VOCAL ALARM will activate as a reminder for the taking of the medicines.

To confirm the correct taking of therapy, the assisted will have to push the red button through the given App. In case of lack of confirm, CentroStella will send an alarm notification to the Operation Center.
